

This week's manual test plan:

From previous week, when a user login it will direct to the profile page week. This week after login, it will direct to the user's profile page (with specific user's id in mongo database):

---

 **localhost:3000/users/profile/5a264f5cbb06b3346cbbf0aa**

---

where the string after profile is the specific user's id in mongo database.

When direct to the user's profile page, it will display user's name, email, username, instrument that user is playing or learning, experience of the instrument, and the biography of the user:

## Profile page

---

ChristinaAng's profile page

Name of the user: Christina Ang

Christina Ang's email: cs242cmo2finalproject@gmail.com

Username: ChristinaAng

Instrument: Christina Ang has not select a instrument

Exprience: Christina Ang's exprience is emtpy

Biography: Christina Ang's biography is empty

[Edit Profile](#)   [Event](#)

When clicking the 'Edit Profile', it will bring up a simple user profile edit page with a specific user's id from mongo database:

---

📄 localhost:3000/users/profile/5a264f5cbb06b3346cbbf0aa/edit

---

After direct to the edit page, it will have a simple edit profile page where user can update the instrument, experience, and biography:

## User's profile edit

Please enter the requirements then press "Update"

Instrument

Exprience

Biography

After filled in the fields and click update, it will direct back to the user's profile page. The user's information should be updated, but the put request I did is not working, thus, for now after clicking update it will still direct back to the user's profile page, but the information is not updating.

In the user's profile page has a event button, by clicking it, it will direct to the user's event calendar page with the user's specific id from mongo database:

---

 **localhost:3000/users/profile/5a264f5cbb06b3346cbbf0aa/event**

---

For now the page is not working, the layout I did with the calendar does not shown properly.
